# iSec

Secure data to strengthen organization.

DigiEn iSec offers to assist organizations to secure data. Through iSec, we aim to plan and manage information flowing in and out of not just the network but within system as well. iSec is moreover a strategy using which an organization can prevent data thefts and other vulnerabilities. The solution offers a complete package right from identifying threats to implement corrective measures to prevent catastrophes.

With help of iSec services, assessment of entire IT infrastructure is carried out to pinpoint major non compliance as per industry best practices. This offering also includes Vulnerability Assessment and Penetration Testing for software applications as well as hardware systems. The approach is followed by a thorough audit of necessary devices and modules.

Findings of the assessments are later analyzed and compared with defined standards to ensure smooth operations with enhanced security for an organization. Moreover, iSec is a strategy which puts all the aspects in proper places in order to achieve highest level security.

In all, DigiEn iSec offers to establish a culture of remaining vigilant and prevent misadventures from happening. DigiEn will always be delighted to be part of the ever-progressing industry.
