

DIGIEN iSec

ABOUT

Information Security is the primary need today in the age of Information. People and organizations generate a lot of data every second. One could easily understand importance of the data now. To generate, store, maintain and keep the data intact a lot of planning, processes and products are required. But the utmost or most primary requirement for all these is securing the data. A proper plan, process and product are required for this.

DigiEn InfoSoft

DigiEn InfoSoft LLP has taken up task of digitizing organizations. Products and solutions provided by DigiEn help organizations to automate processes digitally and ultimately improved and efficient productivity. ERP provided by DigiEn works on concept of digital system itself. Digital ERP i.e. DigiEn ERP provides different modules to manage, analyse and represent data.

INFORMATION SECURITY

Information Security is not limited or just an Antivirus software or a firewall. It's rather a process of multiple software and policies' implementations that ultimately secures an organization. Information security is not mere protection from outside attacks but also securing data from internal thefts. Each device and software has a set of security rules and vulnerability.

This are always relative, as these rules and threats can be different for different organization based on their segment and domain of business. Financial institutions have

different requirements from data wallet service providers. HR services have different rules than mass data generators. It is very much important to understand needs of each organization and applying best set of rules for them.

THE PROCESS

DigiEn InfoSoft LLP provides services for complete stack of this. DigiEn has team of experts which can plan the process, implement it, execute manually or using a software. DigiEn refers industry standards for information security like COBIT, ISO, ITIL, etc. to be implemented in an organization. Each standard has some different set rules for different types of devices. DigiEn has a comprehensive, collaborated set which covers almost all aspects of internal information security. DigiEn has complete customized software which can be modified as per the organizations' needs. An automated module which can enforce policies and cross-check same time to time. DigiEn system provides Policy Management, Audit Management, Compliance Management, Reports and other Analytics for better understanding of the system. DigiEn has vast range of analytical outputs which help organizations improve better every day.

DigiEn iSec aims to minimize data threats of the organizations and make it as much secure as possible. As it is said that data is the knowledge and power in this age. Mail queries on info@digien.in. Visit www.digien.in for more details. Contact on - +91 9016 051411.
